

## Utility Bucket

Utility Buckets - Universal Fit buckets likewise go by the name "slip-on-the-forks" lift truck attachment buckets. These buckets can be used with any make and model of extendable reach forklift. If your unit is unable to be matched with a quick-tach unit, another new or second-hand universal fit bucket could be located as an alternative. Standard universal forklift buckets attach to forks which are up to 6" wide and are 48" long. Bigger fork pockets can be ordered through an account manager upon request.

As they slip directly onto the forks, universal fit buckets stay on the machine and are much less vulnerable to destruction. As opposed to the quick-tach bucket models, universal fit buckets are 50 percent. This additional space makes them ideal for lifting irregular shaped loads like for example elevating roof gravel, moving large debris piles, broken up concrete, backfilling behind walls and tearing off roof trash.

### Quick-Tach Buckets

Quick-Tach Buckets are constructed for extendable-reach lift trucks. They are made to allow placement of materials way beyond the reach of a loader. A hardened beveled cutting blade on the leading edge and on both sides reinforces stability, resistance to wear and provides supreme durability. Quick-Tach forklift buckets are augmented by scuff bars along the bottom of the unit that protect it from scrapes.

Quick-Tach lift buckets can in many circumstances replace the blades and carriage of a forklift, that may weigh anywhere between 100-700lbs. These buckets when set up can free up more load capacity, enabling it to handle both larger and heavier materials. The Quick-Tach is able to pour items around 1.5 feet higher due to the shorter depth of its bucket. These buckets are designed in a customized fashion in order to suit all the specs of certain models and makes of lift trucks. It is important to confer with a construction equipment specialist in order to find the customized Quick-Tach bucket solution for all your needs.

Lift truck bucket accessories are superb for ground level work on construction sites. They are usually meant for transporting snow in northern parts, and sand and gravel loading. Job location clean-up is one more function the forklift bucket carries out well. The many purposes the bucket could do saves the business a lot of time and money as it does need to entirely switch tools or machinery and this could help prevent running into overtime.
